MIADERM® DOES MORE!

Miaderm was designed specifically for the relief of the effects of radiation treatment. We followed the evidence and used ingredients that have been shown in studies to have positive benefits for the skin. But those benefits extend to skin that isn't exposed to radiation.

MOISTURIZE.

A key to Miaderm's effectiveness against the effects of radiation is its ability to moisturize the skin. Miaderm contains marine collagen and hyaluronic acid, two important ingredients found in many high-end (and expensive!) skin products and moisturizers.

RELIEVE BURNS AND IRRITATION.

Designed to soothe the skin, particularly for the effects of radiation, Miaderm also provides relief for other types of burns, including sunburn, kitchen burns and others. Although Miaderm is nonsteroidal, it is formulated to help relieve itchiness, also a side effect of radiation.

USE IT ANYWHERE.

With radiation patients in mind, Miaderm was designed to be used wherever on the body that might be treated with radiation. In other words: Everywhere. Water-based, nonsteroidal and non-irritating, Miaderm can be used anywhere on the body and on all skin types. It is also free of alcohol and nut oil.

Get the best possible benefit from Miaderm! Keep it handy following treatment for the best bang for your buck!
